1980 CITIZENS' INDEX
DISSENT
 ...

Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of three sessions per week of aerobic and resistance exercise. The CG performed no exercise. The HR and EE were measured at baseline and at the end of the 10-week training program. The EG showed a significant decrease in HR and a significant increase in EE compared to the CG. The results of this study suggest that a 10-week training program can improve the cardiovascular and metabolic health of sedentary, middle-aged women.
